

# ACHIEVING THE PRIMARY INTENTIONS

## Engage in and Develop Reciprocal Relations

We are committed to better understanding our relational impact with students, community, staff, and faculty.

## Generate Curiosity to Investigate Influential Questions

Thought leadership is a driving force within a university setting. To be an effective thought leader, knowledge translation and dissemination activities are critical.

## Value the Connectedness between the Environment, the Person, Health, and Nursing

Nursing's metaparadigm is a heuristic that emphasizes interdependent relations among the environment, humans, health, and nursing.

## Dismantle Oppressions, Racism, and Hate

We are committed to improving educational and nursing practices through embedding equity, diversity, inclusivity, anti-racism, reconciliatory and decolonization practices within our teaching, research, and administrative activities.
