# The Successful Launch of a Data Governance Regime

CIRPA Annual Conference, Toronto, October 2017

**Brian Christie – Associate Vice-President, Resource Planning**

**Keith Fortowsky – Director, Institutional Research and Data Governance Officer**

**Office of Resource Planning, University of Regina**

University  
of Regina

# Brian Christie

Associate Vice-President, Resource Planning  
Chair of Data Governance Council  
University of Regina

- Degrees in Math & Physics and Economics, University of Toronto
- Studied Computer Science in days of Fortran IV and punch cards
- Began career as faculty member (Money & Banking)
- Associate Member, Johnson-Shoyama Graduate School of Public Policy and Dept of Economics, U of R
- Consulting: strategic planning, business intelligence
- Office of Resource Planning (ORP): institutional research; budgeting, financial planning and government financial relations; and strategic planning support (7 people)

# Keith Fortowsky

## Director of Institutional Research Data Governance Officer University of Regina

- B.A. Economics, University of Saskatchewan (1984)
- M.Sc. Applied Economics, University of Minnesota (2004)
- Some PhD research in Policy Analysis at TU Delft – studying “innovation commons”; connecting specializations to co-create emergent value.
- “data geek”
- Began career with 15+ years in Saskatchewan Ministry of Transportation as Freight Logistics Economist – tracking freight flows was my intro to data, and measuring and modelling supply chains was my intro to complex systems.
- U Regina Institutional Research since 2004

# University of Regina

- Small comprehensive university principally located in Regina and Saskatoon, SK
- 15,300 students
- Total budgeted expenditures, 2017-18 (all funds): \$331 million
- Programs in Arts, Science, Education, Business, Engineering, Kinesiology & Health Studies, Media, Art & Performance, Social Work, Nursing, and Public Policy
- Known especially for Petroleum Engineering, Clinical Psychology, Subatomic Physics, Data Mining, ...
- THE Top 150 Young University, 2016 & 2017

# Today's Presentation

- What is data governance and why do it
- Components of data governance: preparation, structure, tools, people, policies, plans
- Proof of concept: retention dashboard
- Why we have launched successfully

# Solving the hardest part of reporting: Adoption

Pragmatic Data Governance  
Webinar #4

# Three Aspects of Data Governance

## Technology

1. IT Tools for Data Management  
ex MDM (Master Data Management)  
> **Central IT driven**

## Processes

2. Organizational Policies and Processes  
**(today's U Regina example)**  
> **Central management driven**

## People

3. Workforce Enablement  
(knowledge focussed; "transformational")  
> **Driven by ??**

## Greater Value from *Formal* Data Governance

“All organizations already govern data. They may do it informally, sometimes inefficiently, often ineffectively, but they already govern data. And they all can do it better.”

“Organizations can get more value from their data by moving from informal to formal data governance practices.”

Robert S. Seiner, *Non-Invasive Data Governance: The Path of Least Resistance and Greatest Success*, Technics Publications, 2014

## **Issue #6: Data Management and Governance**

*“Improving the management of institutional data through data standards, integration, protection, and governance”*

# What is Data Governance?

- Data Governance is the activity that, through a combination of people, processes, and technologies, ensures that an organization is able to maximize the benefits of its data assets.
- The main objective of a Data Governance program is to improve the efficiency and effectiveness of the business processes throughout the organization as the result of the effective management and provision of data.
- Data Governance is about knowing that your data are performing. It is the framework that ensures all the data pieces and stakeholders are in place and aligned.
- Focus on data that informs (information)

# Data Governance for the University of Regina

*Data Governance is the glue that binds Data Strategy and Data Management together*

## Its aims:

- That data performance reflects the organization's expectations,
- That the expectations are well-defined and are aligned to the organization's strategy,
- That the right people, reference materials, plans, and tools are in place to define how to handle the data,
- That the decision-making process includes the appropriate stakeholders such as data users and custodians,
- That the stakeholders are equipped with the right reference material to make decisions, and
- That the organization makes better decisions, achieves better outcomes.

## What is Data Governance?

# Data Governance

### Governing What?

#### content

- Data Definitions
- Specs - Reports/Extracts
- Data Requests
- Data Inventory and Lineage
- Data Quality
- Data Access
- Data Security

### What is Governance?

#### stewardship

- Standard, controlled, understood Processes
- Agreed-upon and complete information
- Adoption, buy-in, and use of information

#### processes

#### completeness

#### Adoption

# The data-enabled organization | benefits of data governance

---

When data becomes an organizational asset, rather than being a liability, it “powers” the institution.

**Transparency**

**Informed decisions**

**Improved operational efficiencies and reduced risks**

**Reduced system costs**

**Single source of the truth**

**Trusted results**

# 10 Steps for Building Trust in your Data

## 1. Data requests should be a conversation

- Ask more questions of each other.
- Place importance on the purpose of each report.
- Ask “Why” not “What”

# The Data Governance Project

*Data Governance Working Group (began 2014)*

- Faculty of Graduate Studies and Research – Dean
  - Faculty of Engineering and Applied Science – Dean
  - Faculty of Business Administration – Dean
  - Faculty of Arts – Dean (first year)
  - Academic and Research – AVP
  - Student Services – Registrar
  - University Governance – Executive Director
  - Institutional Research (RP) – Director
  - Information Services (IS) – AVP
  - Information Services – Director
- Sponsors: AVPs, RP and IS
- Consultants: Deloitte

# The Data Governance Project

*24 months preparing to evolve the U of R from an information consumer organization to a data-enabled organization*

- Identifying the information needs of the multiple stakeholder groups to fulfil their day-to-day roles with more than 50 interviews
- Refining an information model that will satisfy the majority of the stakeholders' information needs
- Identifying necessary tools
- Documenting the 6 basic data governance processes and associated policies:

Data definition

Data collection

Data processing or data request

Data storage

Data access

Data quality

# Stakeholders from across the entire organizational landscape built a complete picture of the University's reporting needs

25 interviews with 52 stakeholders

# The technology enabler | Cognos Analytics (IBM)

---

The University followed an RFP process to select the technology solution which best meets the University's requirements.

Newcomp Analytics =  
vendor and  
installation/start-up  
consultant

Defined requirements (business and technical)

Issued RFP

Evaluated vendor responses

Conducted demonstrations using University specific data

Identified preferred solution (Cognos) based on evaluation criteria

Conducted Proof of Concept leveraging Cognos

# The Tools

- Cognos Analytics 11 – reporting tool, dashboards
- IBM InfoSphere DataStage – ETL: extract, transform and load
- Data Cookbook – metadata documentation
- Team Dynamix – project management

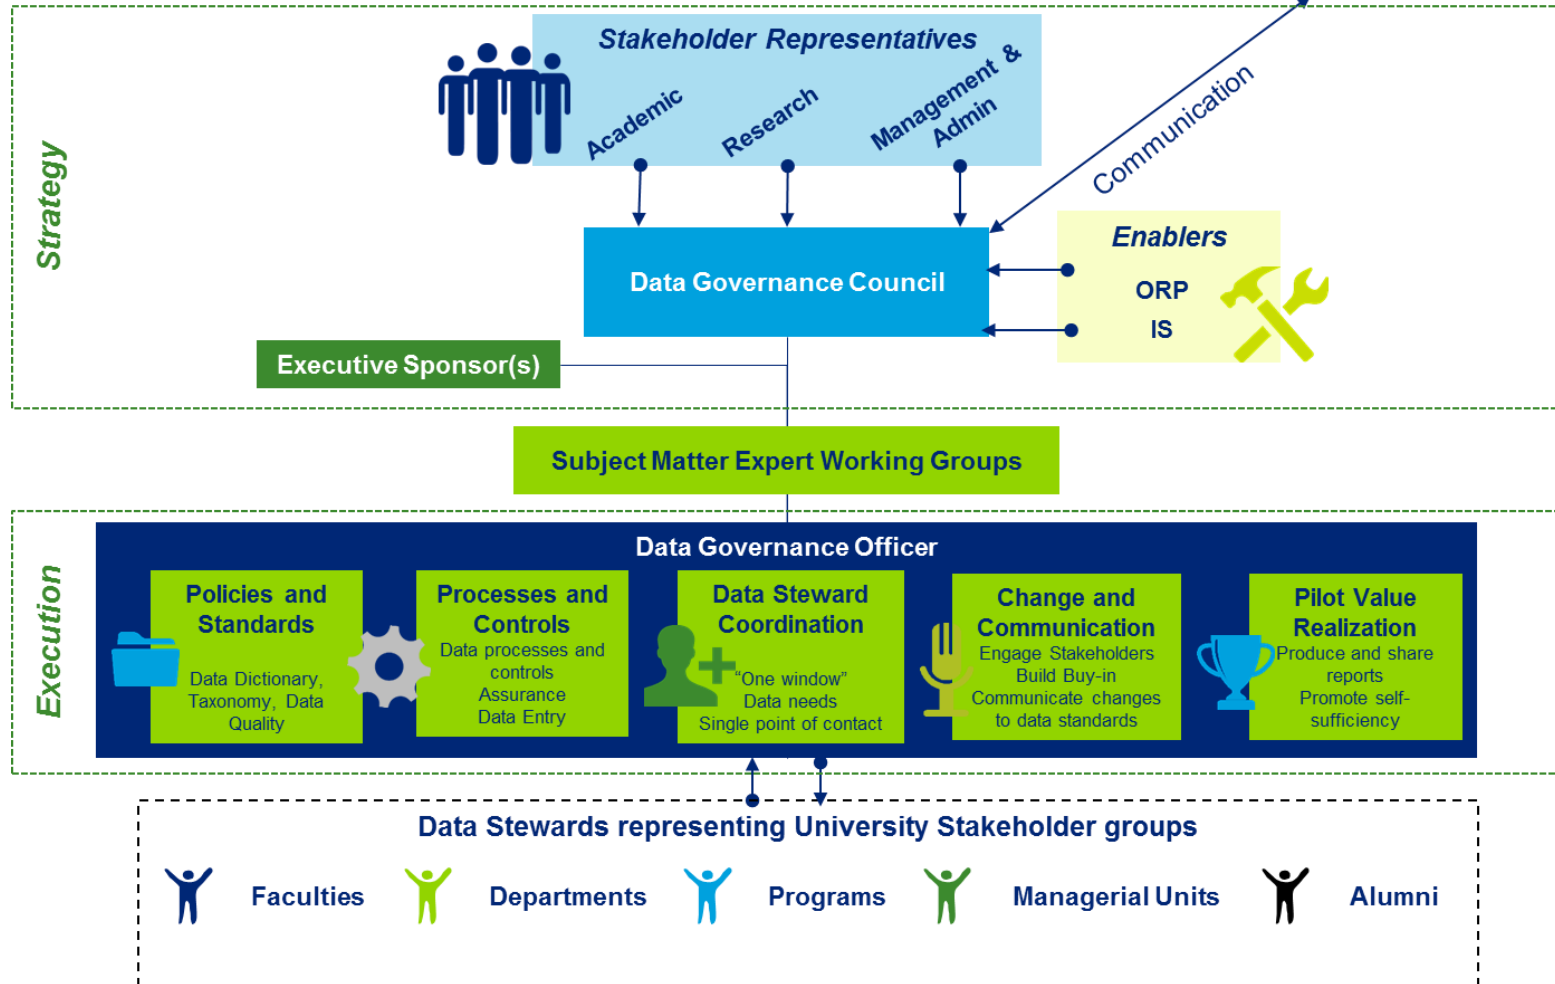

# Data Cookbook New Relevant Features

- Custom workflow for definition and report specification approvals and information requests
- Custom additional attribute fields for specifications
- Quality rules - creation and approvals
- Reference data (valid value lists) - creation and approvals
- Quality issues - users can report quality issues on their own or in relation to a quality rule, definition, or specification
- Quality assessments - users can document tests of quality rules and see visual indications of the quality of the rule or definition
- Data system inventory and technical metadata
- Collections - documentation of a related group of specifications (e.g. annual fact book or dashboard)
- Impact analysis - identifies potential impact on other items of changing a definition or specification

# Data Governance structure | elemental

## External Parties and Influencers:

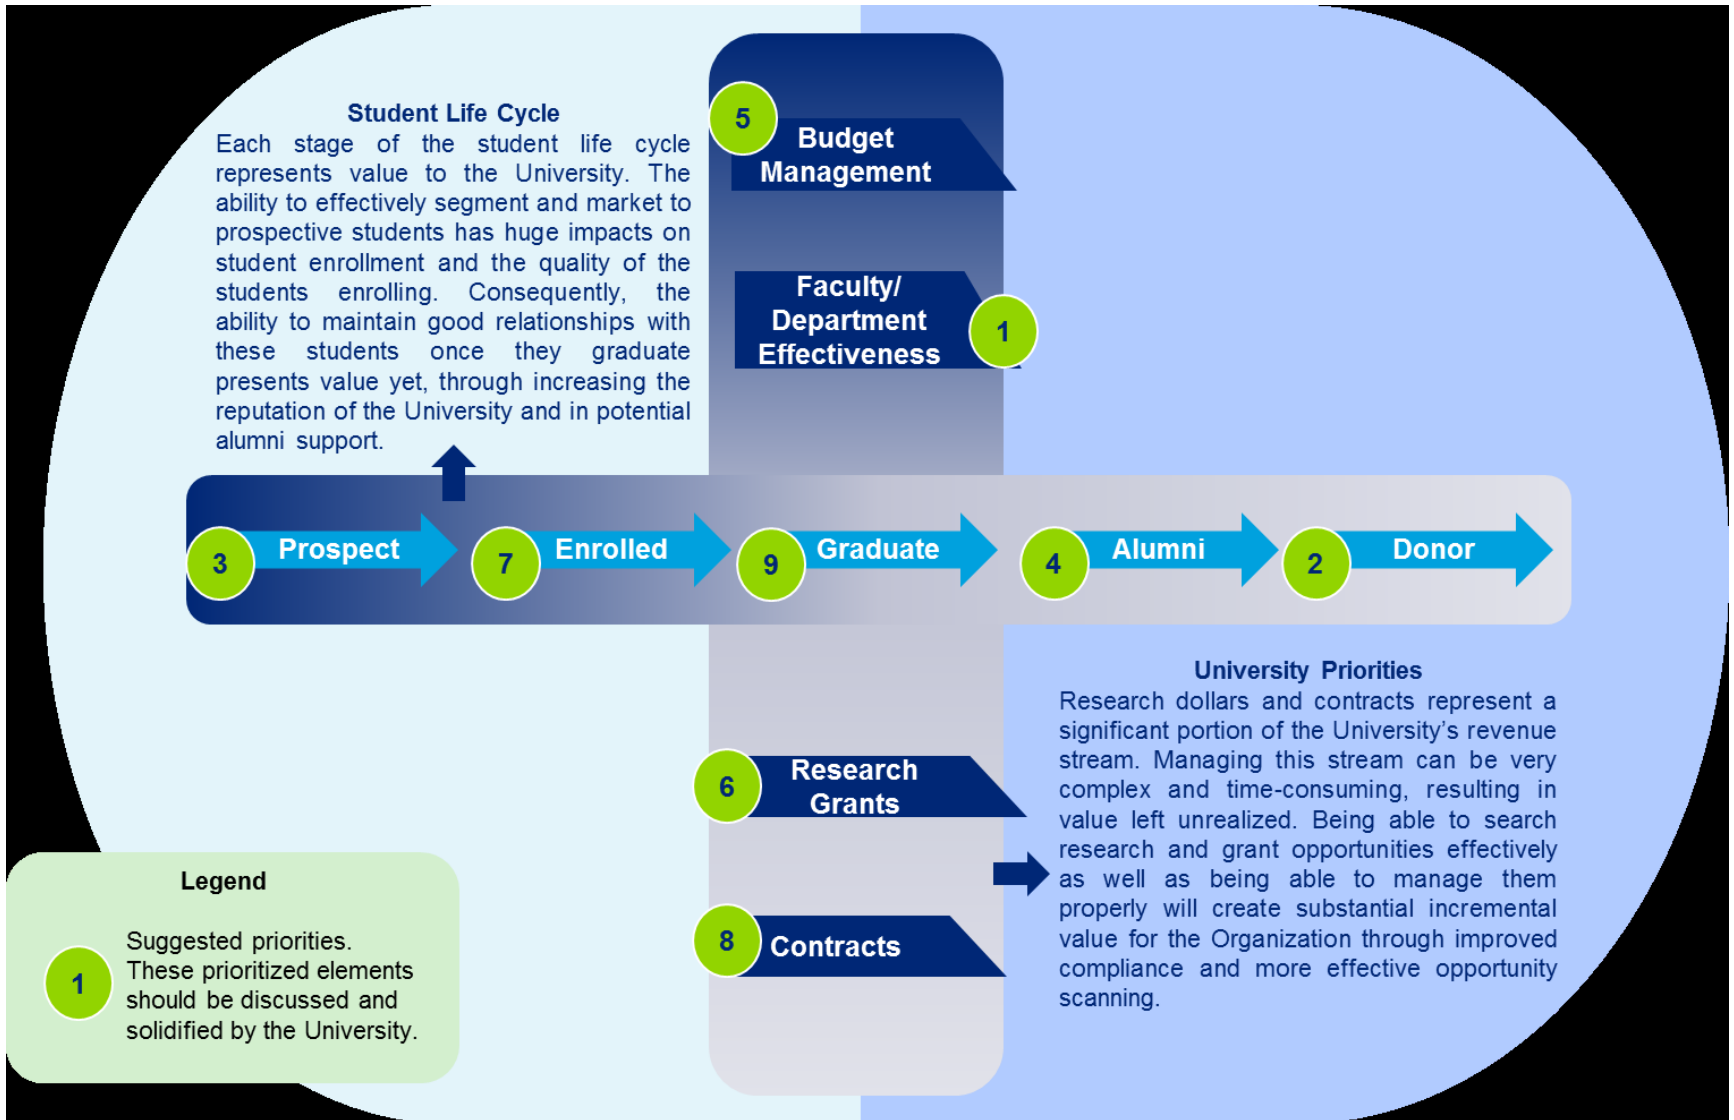

- Government of Saskatchewan
- Community
- Media
- Professional Associations

# DATA GOVERNANCE COUNCIL (DGC)

- The DGC is accountable for effective oversight and control of all data within the University administrative data systems architecture (primarily Banner enterprise applications) and for making these data readily available for organizational decision-making. The DGC produces recommendations and policy on how data governance and data quality can be improved to better enable the achievement of the University's strategic goals. The DGC develops priorities and monitors progress towards this end.
- The DGC also oversees implementation of the University's new data reporting and data warehousing (DW) technologies: IBM Cognos and IBM DataStage. The Data Governance Officer reports to the DGC and is responsible to recommend and lead actions on behalf of the DGC, including day to day implementation of the Cognos and DataStage platforms.
- The current mandate of the Data Governance Council encompasses data located in the databases of centralized university applications. This mandate does not include unstructured information and records like electronic files stored on the University network, emails, or paper-based records. This mandate also does not include datasets collected or produced through faculty research, other than administrative data related to research activities and staffing at the University.

# The data-enabled U of R | an analytical model

## Proof of Concept

- The Data Governance project tested the basic Data Governance processes through a pilot dashboard.
- The pilot was a *student retention* dashboard.
- The pilot dashboard provides student retention insights to a Board or executive member (institutional view), a Dean or Associate dean (Faculty view), and a Student Advisor (Individual student view).
- All views used live data and employed Cognos 10 for visualization (housed at Deloitte). We are an early adopter of Cognos 11 - more “Tableau-like”.
- The Proof of Concept purposes: to demonstrate the value of Data Governance to the institution, to test the process of creating dashboards, and test/illustrate use of Cognos as the visualization tool.

# Selection of the Retention PoC

- A working team engaged in a Dashboard Proof of Concept Workshop to select and design a managerial dashboard to be implemented as part of a proof of concept (PoC).
- Potential PoCs were evaluated on a combination of value and current data availability (“effort”)
- Better access to information about “Enrolled” students was the clear priority.
- Retention subject matter was selected due to high priority at the University & availability of a detailed (but hard to access and to use) dataset developed iteratively in the ORP office over several years.
- Success of Retention dashboard resulted in dropping plans for more PoC dashboards.

## Next Steps

*Deloitte (spring 2016): “You are ready!”*

- Install Cognos on a U of R server ✓
- Move PoC into UR environment (underway) and refine
- Establish the Data Governance Council ✓
  - Membership of the working group retained
  - AVP RP appointed by Executive as chair
- Finalize Terms of Reference for the DGC ✓
- Designate the Data Governance Officer: Director of Institutional Research ✓
- Expose the learnings to a broader audience within the University ✓
  - support and buy-in
  - demonstrating the power of well managed data
- Select ETL product and install ✓

## More Steps

- Finalize Data Governance policies and processes
  - Move draft material into University policy template
- Recruit additional staff: one in ORP ✓, two in Information Services (funded, one being recruited, two current staff being trained)
- Training on tools (underway, starting with ORP, IS, Reg Office, FGSR)
- Qualify analytics vendors ✓
- User Interface (Ux) design for reporting workshop: editor of Smashing Magazine (Sept 2016) ✓
- Develop report design standards and processes
- Select and create initial dashboards in Cognos 11 (including re-created retention dashboard, PMF)

# 10 Steps for Reporting Success

## 7. Create a data quality resolution process

- Give people more to do than complaining when they find a possible data quality issue.
- Don't just apply a band-aid.

### Student Term GPA - Warehouse Logic

Created by [John Admin](#) 3 months ago

Edit

Research cause and the scope of the clean up

Close

Workflow In Use: [Quality issue resolution](#)

Stages: **Review issue** → Research cause and the scope of the clean up → Fix root cause → Clean up data → Closed

Description:

Warehouse ETL should perform a check that gpa value is within range before loading. Right now it simply extracts from production data.

Diagram:

# Policy Sample

## Draft: Data Retention and Disposal Policy Core

### Policy Highlights

- University of Regina data residing within Cognos reports / dashboards is subject to numerous requirements for retention, storage, and disposal. The University of Regina is committed to complying with these requirements.
- A section for Cognos reports / dashboards will be added to the University's existing data retention and disposal policy
- It is the University's policy to maintain and use the data residing within Cognos in a manner that meets its strategic, tactical, and operational needs and is in compliance with all known federal, provincial, and industry requirements.
- The intention of this policy is to provide appropriate guidance to ensure that the University retains its records long enough to meet all legal requirements, has records available that are necessary to fulfill its obligations, that such records are readily available to satisfy research inquiries, and that eligible records are routinely and non-selectively disposed of in the normal course of activities.
- Premature destruction of records or excessively long retention of records, in conflict with this Policy, create the risk that the University will not fulfill its legal, regulatory, or operational obligations and is unacceptable.
- The University's Data Governance Officer will collaborate with the University Archivist to develop a Data Retention Guideline for data elements residing within Cognos reports / dashboards.

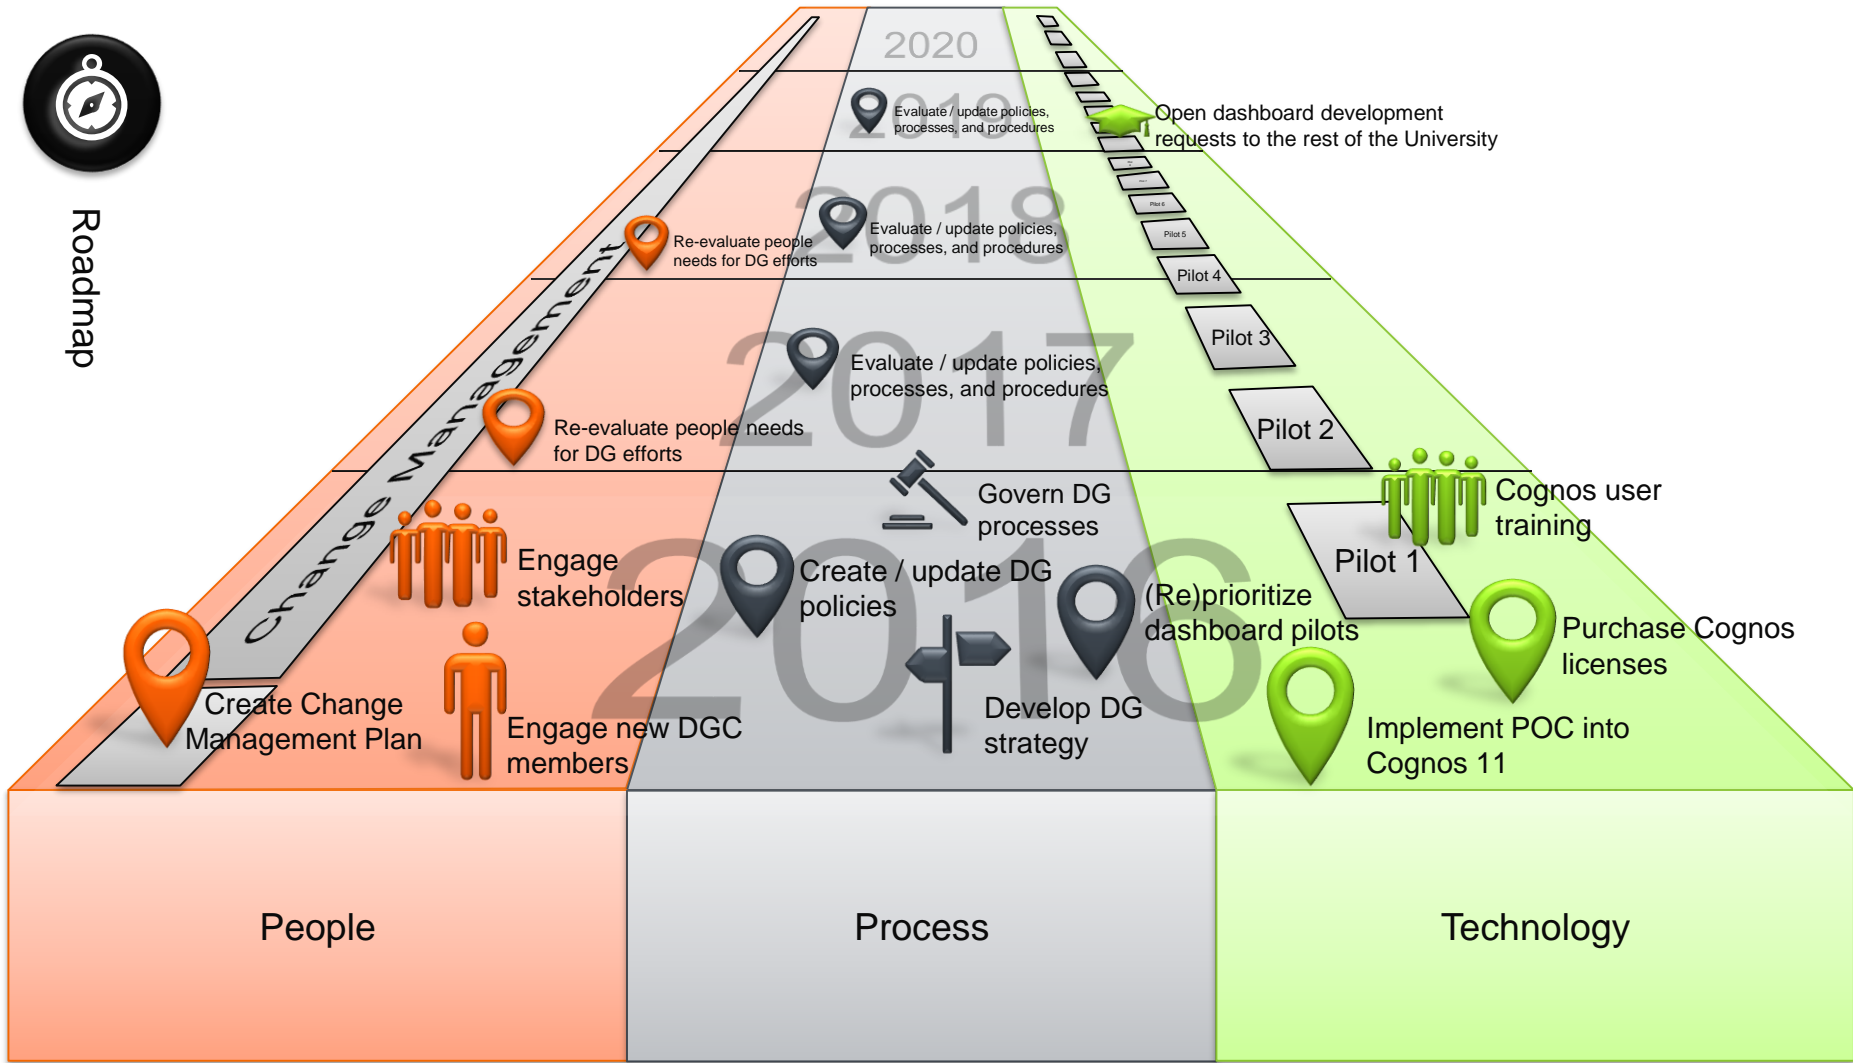

### Consequences for Noncompliance

- Any University employee who does not manage records and information in accordance with this policy may be subject to disciplinary action.

Institution Retention Trend

**MacLean's Retention Definition**

MacLean's measures the percentage of full-time (12 Credit hours or more), first year (undergraduate) students who return in second year (to the institution).

Institution Retention by Academic Unit (2014)

**Academic Unit Retention:**

An undergraduate student returns to the same academic unit in their second year of study as they did for their first year of study.

**Institution Retention:**

An undergraduate student returns to the University of Regina in their second year, but does not return to the same academic unit in which they began their studies.

ECON	202	Introductory Macroeconomics	3

# Success Factors

*A happy confluence of various trends and events PLUS hard work*

- Pent-up demand for better management information (augmented by some new deans with experience elsewhere)
- Emergence of new tools on the market (e.g., Cognos Analytics)
- Willingness of ORP & IS to work together (talents, knowledge, experience)
- Use of consultant – development not done on side of desks
- Data foundations at U of R: views of Banner, etc.
- Interest in new Board members in dashboards, better information
- Successful proof of concept: presentation, topic, multi-level
- Little in way of incremental costs: largely used accumulated funds for one-time costs (software, training, implementation consultancy)
- Provides a coordinating vision for IR work of existing staff
