Magical Connections in Geometry

Regina - Tarski - Pieri

Date: Friday, November 04, 2016

Time: 3:30 - 4:30 PM

Room: RIC 208

Abstract: This talk is about magical connections made in Regina during 6-7 April 1970. The connections mainly involved Mario Pieri (1860-1913), Alfred Tarski (1901-1983), H. N. Gupta (1925-2016), and the author (1939-). The talk will show how these came together, and feature research advice and an elementary geometry problem from Tarski. The problem stemmed from Tarski's early work in Poland as a high-school teacher and university researcher. The talk will show where these connections led, by way of yet further magical encounters.
