GRADUATE SEMINAR
Alyeah Alsairafi

The Commutativity Problem For Schurian Association Schemes Arising From String Coxeter Groups

PhD Student supervised by Allen Herman

November 27th, 2019
2:30 pm
Mathematics and Statistics Lounge (CW 307.20)

Abstract: The objective of this seminar is to address schurian association schemes arising from a string Coxeter group G. I will talk about the problem of when the schurian association scheme $C[G//H]$ generated by the double cosets of G with respect to a vertex stabilizer subgroup H is commutative. I will give examples of these association schemes for finite string Coxeter groups.
