Message from the Director

It's been an exciting and productive year at the SWRC. We are continuing to grow our research centre and work to expand the ways we can support our research associates and students. This year we had the pleasure of bringing Sue McGee on as our research administrator. Sue has been very busy finding ways to support student researchers, and supporting our research associates with grants, hiring, and knowledge translation. We are very happy to have her with us!

Our Research Associates have continued to be incredibly busy, conducting research, publishing articles and reports, and securing grants. In the past year, you will see that our associates have secured federal and provincial funding, written books and numerous articles, and have been consulted on a range of topics by various media outlets. We're also welcoming two new research associates, Daniel Ji and Suleman Fuseini and look forward to supporting their work in the years ahead.

Once again, the SWRC had a very successful year of virtual Lunch & Learns showcasing the research of Faculty, and community members. We continue to be excited about attendance from across campus, and the broader Saskatchewan community. We look forward to continuing this series and plan to return to offering an in-person option for our Lunch & Learns at our two sites in the new year.

In the year ahead, we are looking to strengthen and develop our research partnerships with community organizations and plan to find ways to connect researchers with community organizations looking to collaborate on projects. We look forward to continuing our work with the Associate Dean of Research and Graduate Studies to collaborate on ways to support research and research dissemination in our faculty. I am excited to see what the next year brings for our research centre and wish everyone continued well-being.

Sincerely,

Kara Fletcher, PhD, MSW, RSW

“Community-based pop-up strategies: A rapid assessment and response system to map needle prevalence and implement HIV and syphilis prevention interventions in Regina, Saskatchewan”

Description: Saskatchewan is facing a public health crisis driven by high rates of HIV, syphilis, and hepatitis C (HCV) infections, particularly among people who use drugs (PWUD). Injection drug use is a major contributor to these syndemic infections, exacerbated by structural barriers such as stigma, poverty, and limited culturally safe healthcare. Innovative, community-informed approaches are urgently needed to improve prevention, testing, and linkage to care. **Methods and analysis:** This study will implement a rapid assessment and response system in Regina, Saskatchewan, Canada integrating geospatial mapping of community needle prevalence with pop-up interventions. Needle hotspot maps will be used to guide the deployment of community-based pop-up events offering point-of-care testing for HIV, syphilis, and HCV, alongside education on pre-and post-exposure prophylaxis (PrEP and PEP). A convergent participatory mixed-methods design will be used to evaluate feasibility, acceptability, and effectiveness, guided by the Reach, Effectiveness, Adoption, Implementation, and Maintenance (RE-AIM) framework. Quantitative data will assess changes in knowledge of PrEP and PEP, satisfaction with the intervention, and report new diagnoses and participant demographics descriptively. A qualitative sub-study will include 30 participants and will explore experiences with the intervention, barriers to care, and perceptions of service delivery. **Ethics and dissemination:** Ethical approval has been obtained from the Research Ethics Board of the Saskatchewan Health Authority (#24-91). Findings will be disseminated through peer-reviewed publications, conference presentations, and community reporting. This study may provide a model of community-based, geospatial testing and education that could be upscaled and adapted elsewhere.

“Alternative crisis mental health response models: A knowledge-to-action study”

Objective

Police services assume the role of first responders for mental health crisis situations, providing no mental health support risking police-inflicted harm to the person in crisis. Advances in mental health and police reform have produced alternative response models like co-response that includes both police officers and trained mental health service providers. This scoping review synthesises knowledge to present key processes that facilitate co-response models.

Method

Covidence software was used by two independent reviewers to search eleven databases with terms including ‘co-response’, ‘police partnerships’, and ‘crisis response team’. These reviewers screened 2690 titles and abstracts and 109 full-texts to include 76 articles. Nine independent coders employed thematic content analysis.

Results

Three themes and seven sub-themes were determined as key processes of co-response. Decriminalising mental health involves re-evaluating the role of police and reducing reliance on police in crisis mental health response. Interprofessional collaboration features partnerships between existing services, unifying strategies, and establishing multidisciplinary teams. A piloting phase permits monitoring and evaluation and highlights the diversity of co-response models.

Dr. Andrew Eaton (PI)

Funder: Social Sciences and Humanities Research Council (SSHRC)

Program: Insight Development Grant

Fellow Investigator: Lowe, L.

Duration: 2024-2026

Amount: \$75,000

Discussion

Co-response crisis mental health models are increasingly common, heterogeneous in design and operation, and built upon existing infrastructure. Future inquiries could include trauma-informed care and the evaluation of civilian-led models.

Newly Funded SWRC Projects

“Love in the age of rage: The impact of misinformation, conspiracy theories and political polarization on intimate relationships, a pilot study”

Description: The current socio-political environment has created a context for conspirational narratives about COVID-19, vaccines, election fraud and other counterfactual information. A belief in conspiracy theories has increased in Canada since the start of the COVID-19 pandemic. Conspiracy theories have undoubtedly impacted intimate relationships. For example, a recent study on the impact of QAnon involvement on interpersonal relationships found that involvement with QAnon created a "malignant force" in relationships which caused distance and distress (Mastroni & Mooney, 2024).

Dr. Kara Fletcher (PI)

Funder: Social Sciences and Humanities Research Council (SSHRC)

Program: Explore Grant

Duration: 2025-2026

Amount: \$5,954

“A digital hub for strengthening relationships: Confronting the challenges of conspiracy thinking and misinformation in Saskatchewan”

Description: This proposal aims to create an accessible, engaging, and evidence-based virtual hub to address the psychological and relational impact of conspiracy theories and misinformation on Saskatchewan individuals, couple and families. The team will create a website with practical resources and information on conspiracy theories and misinformation.

This website will include information sheets, infographics, support resources and tip sheets to help users better understand what conspiracies are, how individuals can recognize misinformation, and ways to support loved ones and family members. This website will provide an important psycho-educational resource promoting healthier coping strategies and conflict resolution for family members and have potential positive impact on mental health and well-being.

“Older East and Southeast Asian adults’ perceptions and coping strategies of anti-Asian racism in the post-pandemic era: A mix-methods exploration”

Dr. Kedi Zhao (PI)

Funder: Social Sciences and Humanities Research Council (SSHRC)

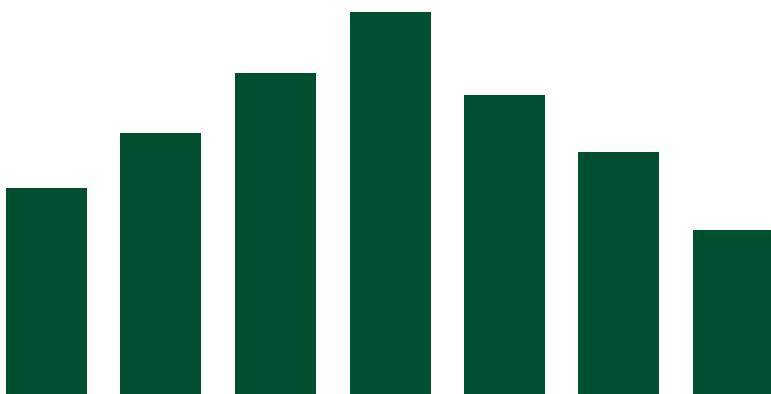

Program: Insight Development Grant

Duration: 2025-2027

Amount: \$74,346

Anti-Asian racism is a social issue that entrenches in Canadian society. The largescale anti-Asian racism that emerged from the COVID-19 pandemic has caused severe harm to East and Southeast Asian communities in Canada, particularly to older adults. However, how older East and Southeast Asian adults cope with anti-Asian racism after the pandemic is still not clear. Through a mixed method design, this study explores various contextual and individual factors that affect their perceptions and coping strategies of anti-Asian racism in Canada. It is anticipated that the findings from this study can help us identify the

evolving influences of anti-Asian racism on older adults from East and Southeast Asian communities, and explore how relevant services and policies can be improved to better support them and other racialized communities.

Project: Co-Applicant on two major national grants

SWRC Researcher: Lise Milne

Collaboration: Comprising a pan-Canadian collection of researchers, collaborators, partners, and persons with lived experience.

SWRC Researcher Project Wrap-Up

Improving Pain in Saskatchewan Study

SaskPain supports The Improving Pain in Saskatchewan (IPSK) research project. The team recently wrapped up the final phase of their work funded by the Saskatchewan Health Research Foundation, Saskatchewan Centre for Patient Oriented Research, and Saskatchewan Community Initiatives Fund. Phase 1 results of the study informed the Saskatchewan Health Authority Chronic Pain Provincial Clinical Network application and action planning. Phase 2 and 3 involved development, implementation, and evaluation of change strategies selected by working groups in three communities.

Erin Beckwell (Co-PI)

Project: Professional Identity Development of Addiction Counsellors in Recovery Working in Addiction Services in Saskatchewan: Grounded Theory
Duration: 2018-2024
Amount: \$78,000

SASKATCHEWAN POPULATION HEALTH AND EVALUATION RESEARCH UNIT

Exploring the Experiences of Substance Use Professionals in Recovery

Saskatchewan Health Research Foundation [SHRF] supported the study led by Gabriela Novotna, which explored lived experience of substance use and recovery among addiction counsellors in Saskatchewan. Twenty-two participants shared how burnout and stigma in small rural recovery networks often blurred personal and professional boundaries. Participants emphasized the importance of personal growth and experiential knowledge in sustaining the quality of their work; many of them considered personal and professional well-being an individual responsibility, and self-care (e.g. personal hobbies and lifestyle choices) as an antidote against a lack of organizational support, training, or acknowledgement of systemic challenges.

As a sole researcher, Dr. Novotna utilized this project to provide numerous opportunities for graduate and undergraduate students to serve as Research Assistants across various project stages. These students then received training in interviewing, data analysis, conference presentations, and manuscript co-writing. The project demonstrates the inherent value of social work research in fostering reflective practice, effective supervision, and interdisciplinary collaboration.

2025 Western Regional 3MT competition

The University of Victoria (UVic) hosted the Western Regional 3MT® Competition on Tuesday May 6, 2025. 17 Graduate students from universities in Manitoba, Saskatchewan, Alberta and British Columbia competed for \$3,000 in prize money and a chance to compete in the Canadian National 3MT event.

- 1st place - Mona Behrouzian, University of British Columbia, \$1500 prize and spot in the National 3MT Competition
- 2nd place - Parker Volk, University of Calgary, \$750 prize and spot in the National 3MT Competition
- 3rd place - Jade Fischer, University of Victoria, \$500 prize
- Peoples' Choice Award - Baily Hack, University of Regina, \$250 prize

The Three Minute Thesis is a competition in which graduate students take on the challenge of presenting their research in only three minutes to a non-specialist audience. This competition began at the University of Queensland and has grown into an internationally recognized event held by over 350 universities in 59 countries.
